The following is an **Examiner's Statement of Reasons for Allowance**:

Claims 1-2, 4-6, 10-12 are directed to a method of identifying modulators of kinase activity of a human cardiac-related ankyrin-repeat protein kinase "in vitro" or "in situ" of specific amino acid sequence and specifically claimed homologs thereof with kinase activity comprising contacting the polypeptide with a test compound and determining the effect of the test compound on the activity of the polypeptide, wherein the substrate of said kinase or homologs thereof is optionally selected from the group consisting of H1 histone, myelin basic protein, ATF-2 and Phas-1 or said kinase itself.

Claimed kinase amino acid sequence is free of prior art. Further, the prior art does not teach or suggest preparing such specifically claimed amino acid sequence. Hence said sequence is also non-obvious. Since said kinase amino acid sequence is

both novel and non-obvious, specifically claimed homologs thereof and method of use of all said products are also novel and non-obvious.

Claims 1-2, 4-6, 10-12 are allowed.
